Profile

Motivated third-year Computer Science and Cybersecurity student with a strong academic background and hands-on experience in robotics instruction, programming, and AI research. Eager to apply problem-solving and technical skills in innovative software development and cybersecurity roles.

Education

West Virginia University

Third-Year Student in Computer Science and Cybersecurity

Class of Fall 2026

Cumulative GPA: 3.79 | President's List: Fall 2024

Relevant Courses: Operating System Structure, Web Application Design, File and Data Structures, Discrete Mathematics, Analysis of Algorithms, Calculus I-III.

Technical Skills

- Programming Languages: Java, C/C++, JavaScript, HTML/CSS
- Development Skills: Front-end web development, database management
- Tools & Platforms: Git/GitHub, Linux, Windows OS, Microsoft Office Suite, Google Workspace, Visual Studio/VS Code, Google Firestore, NodeJS, ReactJS
- Languages: English (native), Spanish (intermediate)

Projects & Achievements

- Web Application Development: Designed, with a team, a small-scale web application using ReactJS (frontend) and Google Firestore (backend) to serve as a simple task planner/management interface. (Application link and source code available upon request)
- Robotics Projects: Programmed and tested robots designed for educational use, ensuring functionality and responsiveness for students' activities.
- Recognized by NASA internship supervisors for adaptability, reliability and effective communication.

Professional Experience

Tutor, LCSEE Learning & Mentoring Center

West Virginia University | Morgantown, WV

Sept 2024 - Present

- Provide one-on-one tutoring for Computer Science, Cybersecurity, and Computer Engineering students, reinforcing concepts across programming, algorithms, and systems coursework.
- Guide students through debugging strategies and problem-solving techniques, fostering independent learning and critical thinking.
- Support academic success by clarifying lecture material, reviewing assignments, and offering study strategies tailored to individual learning styles.

Robotics Instructor Intern

NASA Katherine Johnson IV&V Facility Education Resource Center | Fairmont, WV

May 2023 – Aug 2023, May 2024 – Aug 2024

- Taught robotics programming to elementary and middle school students using the VEX IQ platform.
- Designed engaging educational content to foster STEM interest among students aged 6-12.
- Assisted in organizing and managing a regional drone competition and supervised students at an overnight space camp.

Research Experience

Author, Research Report: The Benefits and Drawbacks of Generative AI Use for Programming Work (unpublished, available upon request)

- Conducted an in-depth analysis of generative AI's impact on the programming field, highlighting productivity enhancements for experienced developers and risks of over-reliance among novice programmers.
 - Synthesized insights from scholarly research and interviews with faculty experts.
 - Explored ethical and practical implications of AI in software development, emphasizing best practices for effective AI use in the workplace.
-
