PROFILE

Early-career systems/software engineer graduating Dec 2026 with degrees in Computer Science and Cybersecurity. Experience analyzing and debugging distributed systems, implementing low-level C/Java/Go software, and documenting technical behavior across complex codebases. Hands-on with Linux, system architecture, test/debug workflows, and technical communication.

EDUCATION

West Virginia University | Morgantown, WV | Honors College - Expected December 2026
B.S. Computer Science and B.S. Cybersecurity | **GPA: 3.79** | President's List (Fall 2025)
Relevant Coursework: Operating System Structure, Computer System Concepts, Secure Software Development, Analysis of Algorithms, File and Data Structures

TECHNICAL SKILLS

Languages & Low-Level: Java, C, Python, Go, Bash, PowerShell, x86 assembly
Systems & Debugging: Linux/Unix (Debian, Ubuntu Server, RHEL, Arch), QEMU, systemd, SSH, Wireshark, Git/GitHub
Distributed & Backend: Django, Celery/Redis, Apache Spark, Docker, Docker Compose, MySQL
Networking: TCP/IP, DNS, ARP, ICMP, Linux networking, local firewalls

SELECTED SYSTEMS PROJECTS

PICARD: Distributed Machine-Learning Platform | *Senior capstone, 5-person team - Spring 2026-present*
Django • Celery/Redis • Apache Spark • Docker Compose • Python • Linux

- Trace behavior across Django, Celery/Redis, Spark, and containerized services to debug failures and administer the Linux server supporting a distributed experimentation platform.
- Generalized algorithm execution to remove hard-coded assumptions, validated multiple algorithm paths end-to-end, and documented architecture and critical code paths for the team.

MergeConflict (MPX): Operating System from Scratch | *CS 450 team project - Fall 2024*
C • x86 assembly • QEMU

- Built an x86 multiprogramming OS from scratch, implementing process scheduling, memory allocation, command handling, and device I/O; debugged behavior under QEMU without the C standard library.

portmango: LAN Discovery Tool in Go | *Personal - 2026-present*
Go • TCP/IP • ARP • ICMP • Wireshark

- Implement network discovery/probing in Go and inspect packet traces in Wireshark to compare observed behavior with expected protocol behavior.

Self-Hosted Homelab | *Personal infrastructure - 2025-present*
Proxmox VE • Debian • RHEL • LXC • Docker • Networking

- Maintain Linux servers and virtualized services in a Proxmox/Debian lab, using isolated systems to reproduce, troubleshoot, and document operating-system and network behavior.

EXPERIENCE

Robotics Instructor Intern | NASA IV&V Education Resource Center | *Fairmont, WV - Summers 2023 & 2024*

- Developed and taught VEX IQ robotics activities at NASA's Katherine Johnson IV&V Facility, troubleshooting hardware/software issues, communicating technical concepts to students, and supporting a regional drone competition.

Tutor, LCSEE Learning & Mentoring Center | *West Virginia University - Sept 2024-present*
Diagnose programming and systems issues across Computer Science and Cybersecurity coursework, helping students reason through code, operating-system, and networking problems.
